DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims (1, 3-10, 12) have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

2. Claims (1, 3-10, 12) are objected to because of the following informalities:
3. In claim 1, the limitation of "N" is not defined. For example, what happens when N is 1 or 3? Then the sub-matrix size is (3/2, 3). Claims 3-8 depend on claim 1 above. In claim 9, the limitation of "N" is not defined. For example, what happens when N is 1 or 3? Then the sub-matrix size is (3/2, 3). Claim 10 depends on claim 9 above.
4. In claim 12, the limitation of "N" is not defined. For example, what happens when N is 1 or 3? Then the sub-matrix size is (3/2, 3). Appropriate correction is required.

Claim Rejections - 35 USC § 101

5. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims (1, 3-10, 12) are rejected under 35 U.S.C. 101 as not falling within one of the four statutory categories of invention. While the claims recite a series of steps or acts to be performed, a statutory "process" under 35 U.S.C. 101 must (1) be tied to another statutory category (such as a particular apparatus), or (2) transform underlying subject matter (such as an article or material) to a different state or thing. The instant

Art Unit: 2611

claims neither transform underlying subject matter nor positively tie to another statutory category that accomplishes the claimed method steps, and therefore do not qualify as a statutory process. Although the step of "transmitting/receiving a signal" inherently requires a transmitter/receiver to transmit/receive the signal, the transmitting/receiving step is not central to the purpose of the method invented by the applicant and is insignificant extra-solution activity.
